

Tempinspect USB

Multi use USB Logger

features

- ✓ Tempinspect™ USB can reliably log up to 30000 measurements in a period of up to 1 year.
- ✓ Simple operation, reduced size and splash resistance (IP65), allow it to take on a wide variety of missions across the entire supply chain.
- ✓ The Tempinspect™ USB can be deployed pre configured or it can be configured on site easily by the user.
- ✓ The user-configurable temperature range: 7 possible preset temperature ranges to choose from.
- ✓ User-configurable data logging intervals: log frequently as every minute and as far apart as every 4 hrs.
- ✓ Visual Alarms: The Tempinspect™ USB datalogger can report temperature excursions during missions.
- ✓ PDF/CSV report: Upon mission completion (once user stops recording) the unit will autogenerate a report when inserted into the USB port of any PC running Windows, OSX or Linux.
- ✓ Logging: Once the cold chain logistics of a product come to an end, the data logger must be stopped to then be able to insert into a usb port and have access to a complete report on PDF file and CSV file.

overview

The Tempinspect™ USB is a remarkably accurate and reliable temperature logger that can be used throughout the entire supply chain. Easy to use and deploy, its 2-color led light supplies mission-critical data on-site that can be further analysed on any computer with a USB port.

The Tempinspect™ USB can be configured and launched using its multi-function button, without need of further logistics. Knowing if the cold chain has been maintained has never been easier or more convenient.

techspecs

Battery life

Minimum 1 year up to 2 years

Max. readings

30.000 measurements

Temperature range

-30°C to +70°C (-22°F to 158°F)

Dimensions (L x W x H)

65mm x 38mm x 16mm

Weight

approx. 20g

PC connection

USB 2.0

Certification

CE, ROHS, Reach
